

**Augmented and Mixed Reality BoF @ SIGGRAPH2011**

# Supporting Mixed Reality Visualization in Web3D Standard

August 11, 2011

Gun Lee

gun.lee@hitlabnz.org

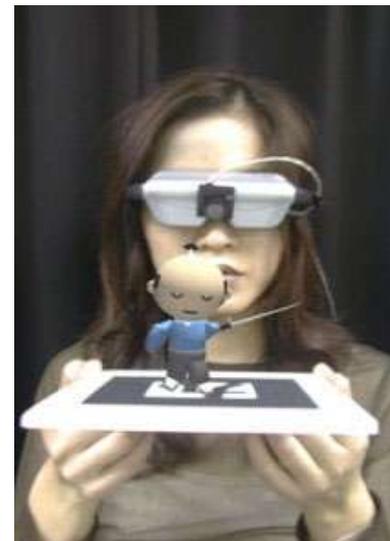

# Augmented Reality

- What is AR (Augmented Reality) ?
  - “Augmented Reality (AR) is a field of computer research which deals with the combination of real-world and computer-generated data.” – wikipedia.org
- Key Features of AR [R. Azuma 97]
  - Combines real and virtual images
  - Interactive in Real-Time
  - Registered in 3D Real World

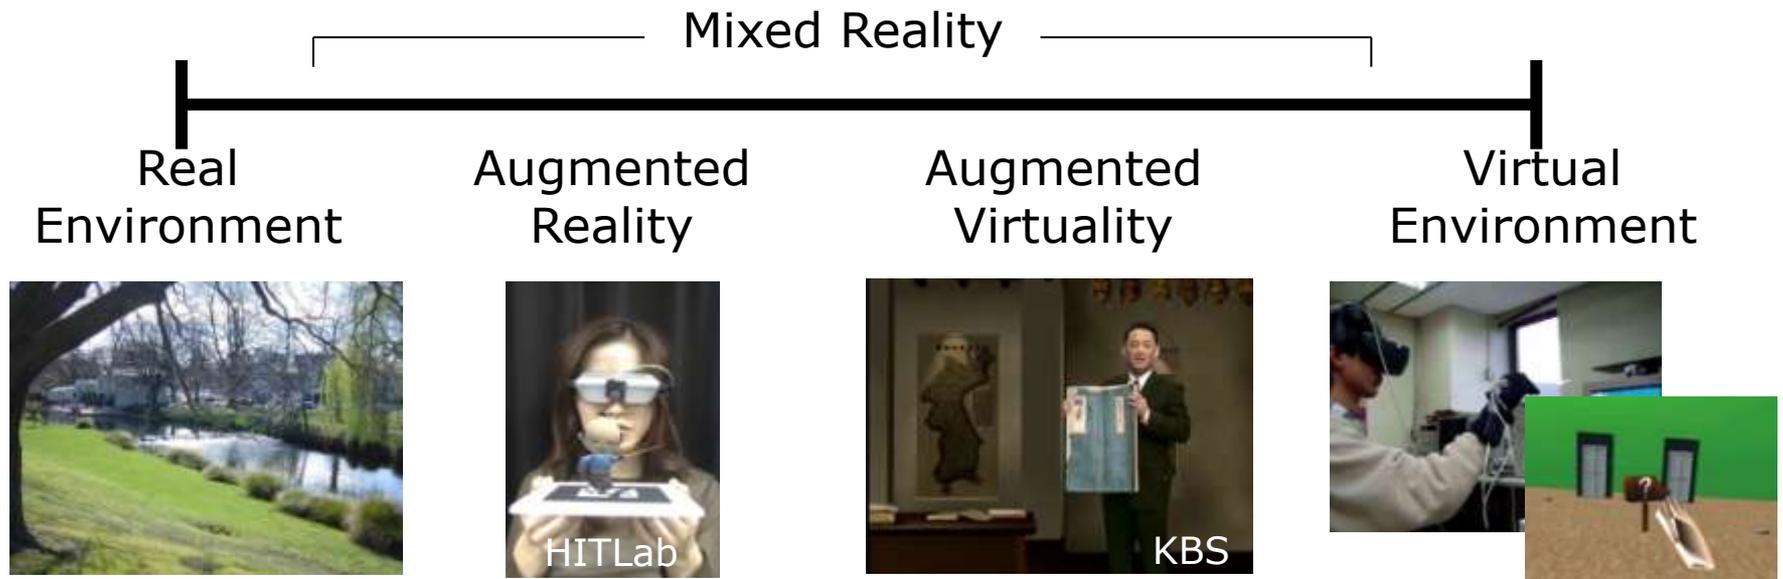

STAR System  
[HRL Laboratories, 1998]

ARToolkit  
[HITLab, Univ. of Washington, 1999]

# Mixed Reality

- What is MR (Mixed Reality) ?

[Paul Milgram's Reality-Virtuality Continuum (1994)]

# AR/MR Applications on the Web

AR Encyclopedia [metaio.com] 

Volvo Ocean Race Promotion, 2008

Smart Grid Promotion GE, 2009 

BMW Z4 Testrive Promotion, 2009 

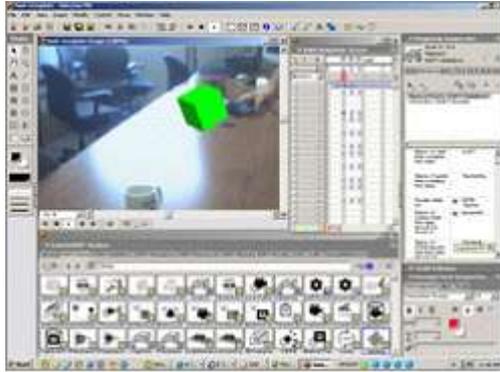

3D Experience Cereal Box, 2009 [Dassault Systemes] 

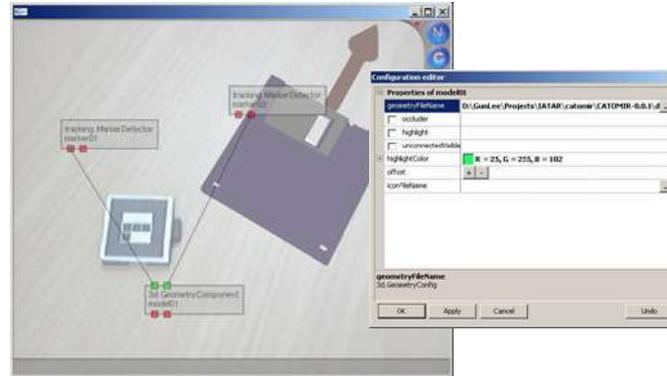

Ray-Ban virtual mirror promotion, 2009 [FittingBox] 

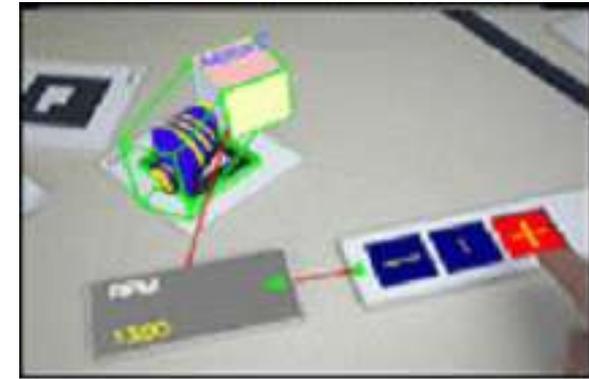

# AR/MR Authoring Tools

DART  
[Georgia Inst. of Tech., 2002]

Catomir  
[AMIRE Project, 2004]

Immersive Authoring   
[POSTECH / HIT Lab NZ, 2004]

ARtalet  
[CTI/GIST, 2007]

BuildAR  
[HIT Lab NZ, 2008]

UnifEye Design  
[MetaIO, 2009]

Standard file/content format?

# X3D

- Extensible 3D graphics
- ISO Certified Standard
- Royalty free open standard
- Developed by Web 3D Consortium – [www.web3d.org](http://www.web3d.org)
- Originated from VRML, now in XML

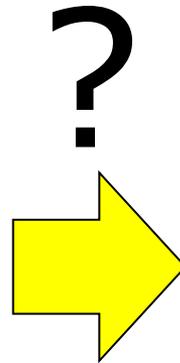

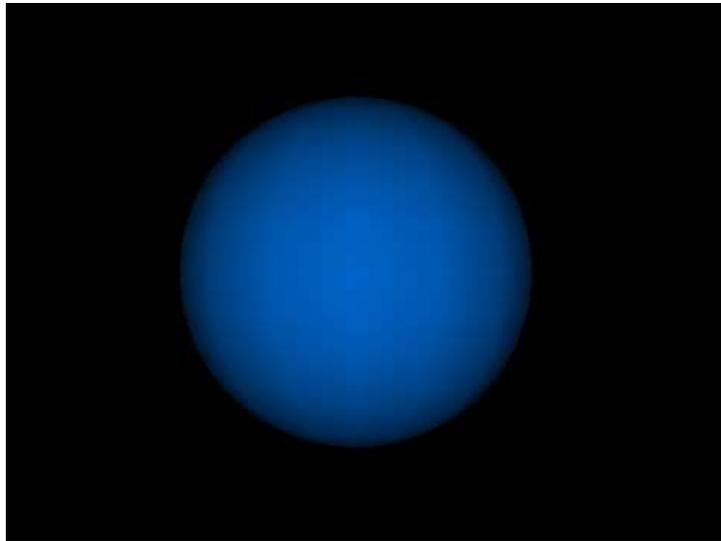

```
<?xml version="1.0" encoding="utf-8"?>  
<!DOCTYPE X3D PUBLIC "ISO//Web3D//DTD X3D 3.0//EN"  
"http://www.web3d.org/specifications/x3d-3.0.dtd">
```

```
<X3D version='3.0' profile='Interchange'>  
<Scene>  
  <Transform translation='-2.4 0.2 1.0' rotation='0.0 0.707 0.707 0.9'>  
    <Shape>  
      <Sphere radius='2.3'/>  
      <Appearance>  
        <Material diffuseColor='0.0 0.5 1.0'/>  
      </Appearance>  
    </Shape>  
  </Transform>  
</Scene>  
</X3D>
```

# Extending X3D to be AR/MR capable!

# Requirements of X3D to be AR/MR capable

- Adding real world view
  - Live video (esp. camera on the user's computer)
  - Merging real and virtual image correctly
    - Camera calibration
    - Occlusion
    - Shadow
    - Reflection & Refraction
  - Live movie texture
- Registration
  - Static - Relationship between real and virtual spaces
  - Dynamic - Tracking user's viewpoint
- Real-time Interactivity
  - Tracking (users & other real world objects)

# Adding real world view

- Camera sensor (on the browser device)

```
CameraSensor:X3DDirectSensorNode {  
    SFImage      [out]      value  
    SFBool       [out]      on          FALSE  
    SFMatrix4f   [out]      projmat    "1 0 0 0 ... "  
    SFBool       [out]      tracking    FALSE  
    SFVec3f      [out]      position  
    SFRotation   [out]      orientation  
}
```

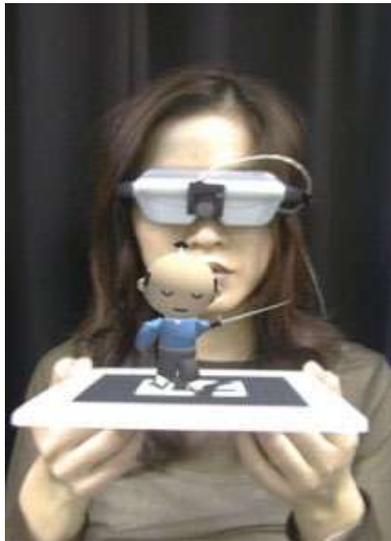

- Local live video stream background and texture

```
...  
<CameraSensor DEF='cam'/>  
<ImageBackground DEF='bg' image=''/>  
<ROUTE fromNode='cam' fromField='image' toNode='bg' toField='image'/>  
...
```

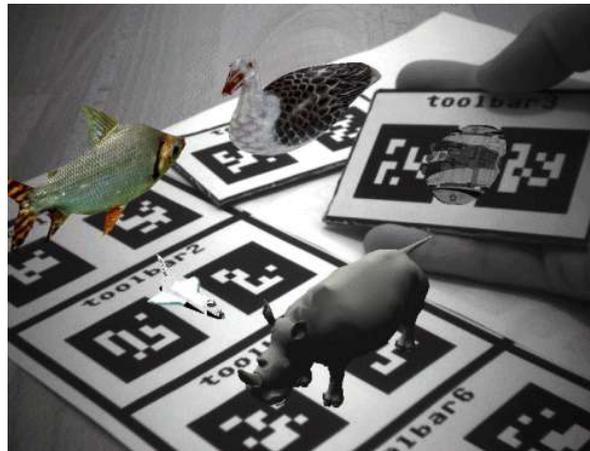

```
...  
<Appearance>  
  <MovieTexture loop='true' src='cam'/>  
</Appearance>  
...
```

# Tracking

- Sensor based Tracking
  - Ultrasonic, Electromagnetic, Mechanical, Optical motion capture
- Computer Vision based Tracking
  - ARToolkit (HITLab), ARTag (Canadian NRC), BazAR (EPFL)

[ARToolkit, HITLab]

[ARTag, CNRC]

[BazAR, EPFL]

# Tracking (cont'd)

- Tracking methods

- Too many/various to be standardized...

- Delegation to browser/viewer implementation

- Browser decides (or provides an interface to choose) which tracking methods/devices to use/support
- Tracking technology in use is hidden, and only the tracking results are provided into X3D scene

- X3D only provides interfaces to the tracking results

- X3D authors do not have to worry about the hardware system setup in run-time

```
TrackingSensor:X3DDirectSensorNode {  
    SFVec3f      [out]    position  
    SFRotation   [out]    orientation  
}
```

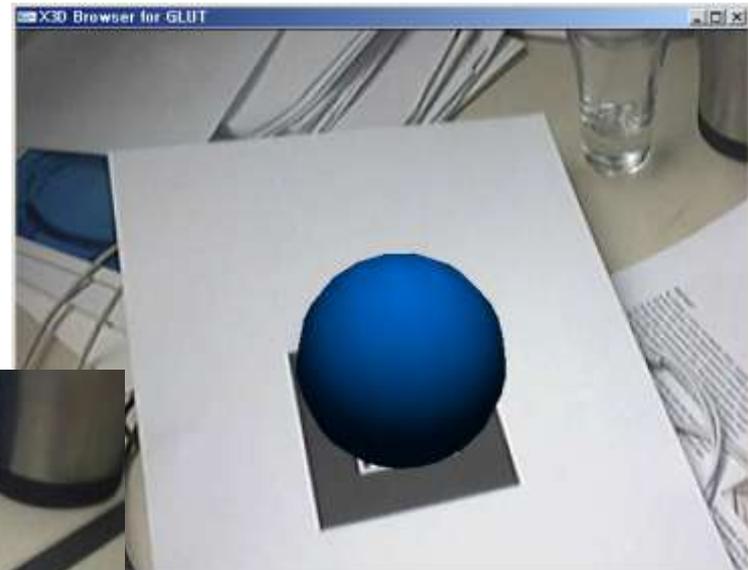

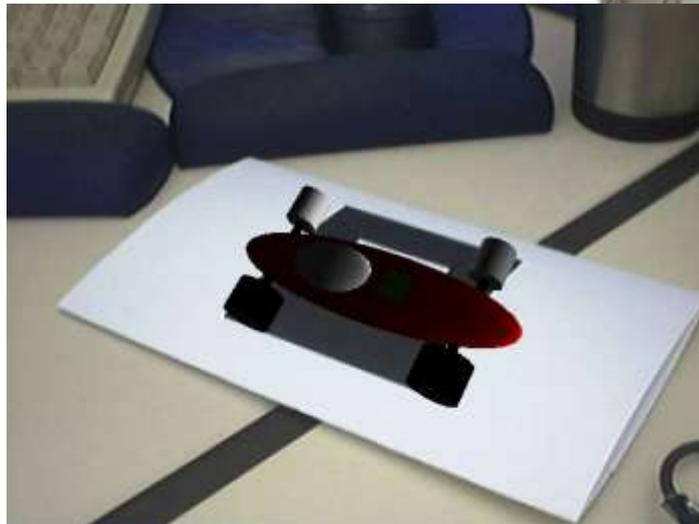

# Camera Calibration

- Standard Viewpoint Nodes
  - OrthoViewpoint – Orthogonal projection
  - Viewpoint – Perspective projection
- Viewpoint node for MR visualization needs ...
  - Directly assigning projection matrices
    - Assigning values from LiveCamera

```
MatrixViewpoint : X3DViewpointNode{  
    SFMatrix4f      [in]      projmat  
    SFVec3f         [in,out]   position  
    SFRotation      [in,out]   orientation  
    SFNode          [in,out]   cameraSensor  
}
```

# All together – X3D might look like ...

```
...  
<Scene>  
  <CameraSensor DEF='cam' />  
  
  <Background DEF='bg' />  
  <ROUTE fromNode='cam' fromField='image' toNode='bg' toField='image' />  
  
  <MatrixViewpoint cameraSensor='cam' />  
  
  <Transform translation="0 0 40">  
    <Shape>  
      <Appearance>  
        <Material diffuseColor='0 0.5 1' />  
      </Appearance>  
      <Sphere radius="40" />  
    </Shape>  
  </Transform>  
</Scene>  
...
```

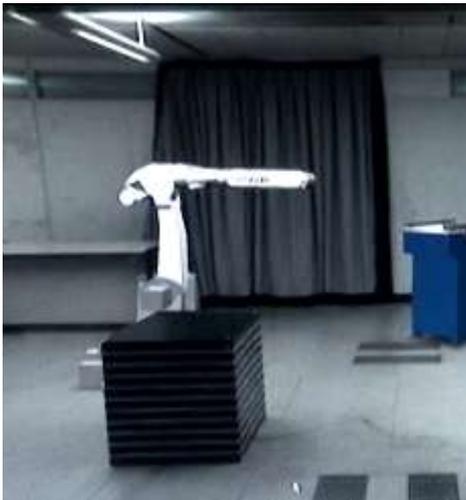

# Other Visualization Topics

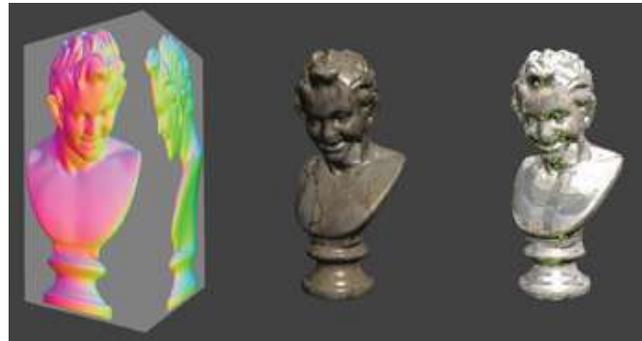

- Correct occlusions and Augmented Virtuality
  - Masking - Ghost object rendering
  - Depth image (e.g. stereo image matching, depth camera)
    - Pixel = rgb**d**
    - Got popular with MS Kinect
    - Support Depth image in X3D nodes (SFImage, MovieBackground, MovieTexture)
  - Heuristics (chroma keying with skin color)
    - Add KeyColor field to MovieTexture

Depth Image  
[Wikipedia]

Masking [ETRI]

Relief Texture  
[NVIDIA Cg Tutorial]

Chroma Keying / Augmented Virtuality  
[Kudlian Software]

# AR WG @ Web3D

- Focuses on utilizing and extending X3D capabilities to support augmented reality (AR) and mixed reality (MR) applications.
  - Started as a SIG on AR initiatives in July 2009
  - Became a working group in June 2011
- Goals
  - Collect requirements and describe typical use cases for using X3D in AR/MR applications
  - Produce and propose X3D components for AR/MR scenes and applications
  - Produce sample AR/MR applications using X3D to demonstrate how this functionality can work correctly
- Regular teleconferencing meeting
  - Monthly (3rd Wednesday) 10am CEDT, 5pm KST, 1am PDT

# **Lots of things to do @ Web3D AR WG**

**Please join us!  
You are more than welcome!**

Thank you!
